

We at PikoTV provide our video broadcasting solutions to telecommunications companies, internet service providers, satellite and cable network owners, television stations, and over-the-top (OTT) platforms so that they, too, may provide their customers with live and on-demand content.

PikoTV is an IT company that caters to the media and entertainment industry by developing solutions for both conventional TV transmission and over-the-top services. Many of our Tier-1 customers have millions of subscribers, while some of our Tier-3 customers have only a few hundred. Our products may be scaled to meet growing or shrinking needs without breaking the bank. Our off-the-shelf offerings include a variety of tools for encoding, decoding, packaging, and encrypting audio and video. Our software solutions are not built on proprietary hardware, but rather on open HW components that can be purchased by anybody, such as Dell servers and NVIDIA graphics processing units. Our products are built on cutting-edge technology that allows for maximum density in a small footprint. Based on these features, our products are eco-friendly from an environmental and climatic heating perspective, simple to maintain thanks to fewer moving parts than competing options, and rack cabin space-friendly in server rooms. Subtitling capability on Live OTT feeds via OCR on RF DVB streams, no black screen on source interruptions, and a number of additional capabilities requested by various markets are just a few examples of how our cutting-edge technology improves the product and service we offer our clients.

To cut a long tale short, PikoTV is a one-stop shop for all of your broadcasting needs.
